

Help Track Aquatic Invasive Species in Our Community -  
*Just Snap Photos!*

# MiCorps AIS Detection Blitz

Your Observations Make a Difference!

*From June 29–July 12, 2026, we are partnering with the Michigan Clean Water Corps (MiCorps) to help map aquatic invasive species (AIS) right here in our local waters. Using the free iNaturalist app, anyone enjoying nearby lakes, streams, and wetlands can easily help track and map invasive species across MI.*

*To join the project, scan the QR code or search “MiCorps” in the iNaturalist app!*

**LOGO HERE**

**Why Participate?** It's easy and fun - simply snap photos while you're on the water during the project timeline, no experience needed. Each observation you share has a statewide impact, helping pinpoint where invasive species may be found. Best of all, you'll learn as you go - experts and fellow iNaturalist users pitch in to identify your finds in real time!
