

Help Track Aquatic Invasive Species Across Michigan- Your Observations Make a Difference!

MiCorps AIS Detection Blitz

Help Track Aquatic Invasive Species in Michigan- Join the MiCorps AIS Detection Blitz!

Spending time on Michigan's lakes and rivers this summer? Help protect them! The MiCorps AIS Detection Blitz is a fun, easy way to help track aquatic invasive species while you're already out enjoying the water. Simply snap photos of anything you think may be an aquatic invasive species using iNaturalist and contribute to a statewide effort!

Join the MiCorps AIS Detection Blitz from June 28 – July 6, 2025! Whether you're boating, paddling, fishing, or simply exploring the water, you can help document Michigan's aquatic species. Just take a quick photo and upload it to iNaturalist!

How it Works:

- **Snap a Photo** – Spot an aquatic plant or animal you think may be invasive? Take a picture using your phone camera within the allotted dates.
- **Upload to iNaturalist** – Find the project and share your observation in the app and the iNaturalist community will help with ID.
- **Contribute to Science** – Your photos help track invasive species and support Michigan's water monitoring efforts.
- All data contributes to a statewide snapshot of what's out there!

 **Event Window:**
June 28 – July 6, 2025

 **Statewide Participation**
Anyone can join!

 **Join on iNaturalist:**
Scan QR code or search
"MiCorps" in the app to join
the project

 **iNaturalist is free and
easy to use!**

Just snap a photo,
upload it, and
contribute!

**It's easy, fun, and makes a difference- snap a photo,
upload it, and be part of a statewide effort!**
